

HEALTH AND SAFETY CRANE SUPERVISOR

Course Objectives

This 2 day course is aimed at those with an understanding of cranes and lifting procedures and is ideal for those whose job includes the role of a "lift supervisor".

Location:

NLT Training or employers premises if suitable

Duration:

2 Days

Designed For

This course is designed for the experienced Slinger/Signaller who will be supervising lifting operations.

Course Content

- Understand and follow instructions given in the form of a method statement.
- Identify the roles and responsibilities of all personnel involved in a lifting operation and brief them in their duties as dictated in the method statement.
- Brief all personnel on the specific hazards involved in the lifting operation as identified in the risk assessment.
- Site and position a crane and any other ancillary equipment in accordance with a lifting plan.
- Ensure that the area of operation is suitable for lifting activities and in accordance with a lifting plan.
- Identify & explain the relevant information relating to lifting equipment and accessories and match to certification.
- Confirm appropriate lifting accessories for different types of load as identified in a lifting plan.
- Initiate and supervise a safe system of work to include:
 - Any site preparation to be carried out.
 - Slings and placing accurately, various loads including balanced, unbalanced and loose, including to and from confined and blind areas.
 - Site clearance and the return of lifting accessories to storage.
